

Technical Product Information

Consolidation of Compressor part numbers

1. Outline

This bulletin is to inform you about the consolidation of DENSO Compressor part numbers.

2. Applicable product

Part of the DENSO Aftermarket Compressor range.

3. Background

To enhance the aftermarket compressor range, DENSO has consolidated numerous aftermarket compressor part numbers. In the below overview you can see which part numbers have replaced the previous part numbers or are deleted from the range. Because of this consolidation, the stated compressors have one fixed amount of oil, which needs adjustment for some vehicle applications. This means that it is necessary to check and adjust the oil quantity before installing the compressor in the vehicle. The right amount of oil is very important for the durability of the compressor and the efficiency of the AC system.

| Old | | Replaced by | | Compressor Type | Make |
|-----------|----------|--------------------|----------|-----------------|---------------|
| DENSO P/N | Oil (cc) | DENSO P/N | Oil (cc) | | |
| DCP02013 | 245 | Deleted from range | | 6SEU12C | Audi |

Caution!

Check the compressor installation guide to adjust the oil amount according to the car manufacturer data! You will find the compressor installation guide in the box with the new compressor, in TecDoc and on our aftermarket website. www.denso-am.eu

4. Service Parts

To improve the serviceability of the compressor, we offer the packing for the oil plug and ND-oil 8 as a service part. The packings are packed per 10 pieces and the oil is supplied in 250cc cans. Availability of the ND-oil 8 is planned for March 2016.

Part number: 047294-0030

Part number: 997635-8250

5. Compressor Installation Guide

The compressor installation guide will be revised, because of this consolidation and will also be extended to 17 languages as standard. With these improvements, we are providing first class customer support.

Format will be a 17 language A4 booklet
